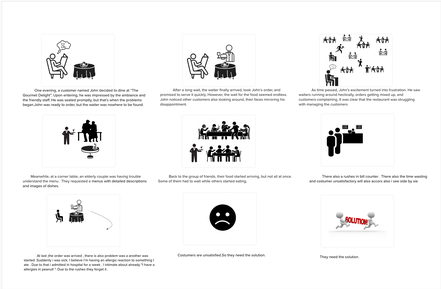
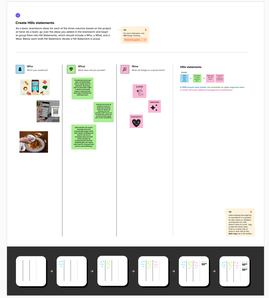
HOW MIGHT WE!

STORY BOARDING



CRAFTING HILLS



PROTOTYPE

Manual order-taking can result in mistakes. Misunderstandings between customers and servers.

Allowing customers to customize their orders empowers them to tailor their meals according to their preferences, dietary restrictions, and taste. Implement options for portion sizes, ingredient substitutions, and add-ons.

Customers often experience delays in receiving refills for their beverages due to the need for servers to manually monitor and refill drink dispensers.

Install smart sensors in drink dispensers to automatically monitor beverage levels and initiate refills as needed, minimizing server trips and ensuring timely refills for customers.

Customers often face challenges in making menu choices efficiently, leading to longer wait times for orders to be placed. This can result in frustration and decreased customer satisfaction.

Implement a digital menu system that provides detailed descriptions and high-quality images of dishes, enabling customers to make informed decisions quickly and independently.
